

DOLICHOS HIGH WORTH

HIGH WORTH

Introduced to Australia in 1973 as CPI 30212 (CPI 20212?) from Southern India. Earlier flowering variety, originally intended for grain production (high seed yield) in areas experiencing early frosts. Also has adequate forage dry matter production. High Worth has purple flowers and black seeds. Seed weighs 4,000/kg. It has high seed yield coupled with adequate foliage DM production. It has purple flowers and black seeds.

High Worth is widely grown in northern New South Wales for forage and will not normally set seed before frosts which occur in late autumn or early winter.

- Can be used for silage, grazing or hay
- Sow 50kg/ha in 1m rows
- Plant during November to January
