

WHITE OATS

WITTEBERG

OVERVIEW

WITTEBERG has a late maturity and is ideally suited to longer production cycles. When planted early to mid-autumn, peak production is expected in late winter. WITTEBERG is suited for dryland or irrigation.

Adapted to a variety of climates and conditions and produces a high quality, high yield which is well suited for silage, hay and grazing. WITTEBERG is an ideal alternative to other forage cereals

- High yield
- Well suited for grazing, hay and silage
- Late maturity
