

## QUICK ESTABLISHMENT AND EARLY PRODUCTION

Amba establishes well and has a strong growth right from the start. Amba has proved to have a digestibility on the level of the more late varieties. This is unique for an early variety.

Amba has been proven to be a winter hardy variety, which is tolerant to late night frost in spring. Amba is tall growing and fits well in with mixtures with early tall growing grasses as well as red clover. When the first cut is taken at the right time before heading, no stems will be produced in the aftermath.

- Early variety
- High yields of dry matter
- Very winter hardy
- High digestibility compared to other early varieties
- Early production
- High mixture adaption
